

METAL ROOF HATCH

1. Picture of the product

1. Roof hatch

2. Product description

The roof hatch can be used as a maintenance or escape route in all roof types. The hinged cover reduces damage to the roof when the hatch is used frequently. The locking mechanism allows for locking the hatch from the outside so that it can still be opened from the inside in case of emergency.

The steel frame is accurately dimensioned and easy to assemble.

3. Technical information

- Opening size 600 x 600 mm.
- The frame and body of the hatch are made of galvanised steel.
- Covering with sheet metal according to the roof material.
- Standard frame height 180 mm.
- Hinged cover with gas springs.
- Can be locked from the outside; the locking can be opened and closed from the inside.
