

FRENCH BALCONY RAILING

1. Picture of the product

2. Product description

The French balcony railing is an easy and care-free solution to prevent falling from doors that lead to a balcony without a landing.

The French balcony railing is made of hot-dip galvanised steel and powder-coated and, therefore, it is resistant to corrosion even in challenging conditions. The French balcony railing can be used for balcony door widths of 900 mm or smaller; other dimensions can be made to order.
